**Develop by:** Ashwini Sharma.

## DESCRIPTION

Create a dynamic and responsive web application for booking movie tickets online for different genres and languages.

### Features of the application:

Registration

Login

Payment gateway

Searching

Filtering

Sorting

Dynamic data

Responsive and compatible with different devices

### Admin Portal:

It deals with all the backend data generation and product information.  
The admin user should be able to:

Add or remove different genres to or from the application to build a rich product line

Edit movie details like name, ticket price, language, description, and show timings to keep it aligned to the current prices

Enable or disable the movie shows from the application

## User Portal:

It deals with the user activities. The end-user should be able to:

Sign-in to the application to maintain a record of activities

Search for movie tickets based on the search keyword

Apply filters and sort results based on different genres

Add all the selected movie tickets to a cart and customize the purchase at the end

Experience a seamless payment process

Receive a booking summary page once the payment is complete.

Thank You!
